

# Snow Bird Systems

If you are one of our fortunate customers to have a ski home up north or a winter home down south, we have some products you should consider.

## Wi-Fi Thermostats

Monitor and adjust your home temperature from anywhere ... using a smartphone, tablet or laptop. We suggest a **Lyric from Honeywell** or a **Nest Thermostat**. These digital, WiFi enabled Smart Thermostats allow you to change the programmed settings while on vacation or in your “other” home ... and they also save energy and may be eligible for energy rebates from your local utility company.

## Pipe Freeze Up Protection

- **Glycol** – A good preventative is to add glycol to your hot water heating system to avoid pipe freeze-ups.
- **Whole Home Generator** – Keep your power on, even when the power is out! In just ten seconds, a Kohler generator can automatically power your HVAC, sump pump, and major appliances – all at the same time. A whole-home generator helps to control things inside your home, even when you aren't there.

**Call TODAY! 978-486-0600**

## Flood & Ceiling Protection

- **E-Z Trap** – Reduce your fears of ceiling damage from an overflowing air handler or furnace. Nashoba Air offers two lines of defense – First is an E-Z Trap in-line float switch that detects blocked condensate drain and trap. Second is an overflow sensor on the pan that will shut the system down in case of an emergency.
- **Pressure Pal Hydronic Axiom Feeder for Boilers** – Prevent major floods! In the event of a system rupture, only the contents of the tank will be pumped into the system. This will also provide leak detection by dropping the fluid levels, giving you an immediate notice that the system has developed a leak.
- **Flood Master** – Alerts and shuts down the water heater.
- **Lyric Flood and Freeze Protection** – Get notified on your smartphone or tablet as soon as a leak occurs on your water heater, hot water boiler or washing machine.
